-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-9, 12, 15, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. 5613427.

Referring to Figs. 2-12, col. 2, lines 27-45, and col. 4, lines 14-29 especially, US'427 discloses a flexible sheet material consisting of a fat absorbent sheet 20 alone, with a polymeric foil upper layer 32, evenly distributed perforations, disposable, and in a roll suitable to accommodate diverse size requirements (claim 15).

Claim Rejections - 35 USC § 103

Claims 4, 5, 13, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'427 in view of US pat. 5680956.

The claims differ from US'427 only in calling for varying the density of perforations between the center and peripheral regions, and an area of perforations occupying 25-40% of the sheet area. However, US'956 discloses varying the density of perforations between the center 45 and peripheral 40 regions. It would have been obvious to adapt such a varying density since US'956 teaches such to enhance uniformity of cooking. Moreover, the proportion of the sheet area occupied by perforations would be dictated strictly by the type of food item being cooked, and therefore well within the competency of one of ordinary skill in the art.

Claims 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US'427 in view of GB2220346.

The claims differ from US'427 only in calling for a "fat migrative" silicone top layer. GB'346 discloses, in the abstract, a silicone layer on the top surface of a baking sheet, which is inherently "fat migrative." It would have been obvious to adapt the silicone layer of GB346 to the sheet of US'427 since it is well known to be heat resistant and to prevent sticking of food items.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph M. Pelham whose telephone number is 571-272-4786. The examiner can normally be reached on M-F 8:30 AM to 5:00 PM.
